

Brussels, 9 November 2018.

IT manager

WeCitizens

[WeCitizens](#) is an independent civil society organization (CSO) established in Brussels, in 2012, wanting to reduce the break between the citizen and politics. With our transparency tools we contribute to better democracy & governance.

We have produced five [vote advice applications](#) (VAA) in 2014 in Belgium for EU and other elections. In 2016 we started publishing an [Index of transparency of political parties](#). In 2015, we put online [PoliticiansOnline](#), which is the biggest publicly available database about Belgian politicians. It is interactive and will be participative. WeCitizens is politically impartial. We have around 25.000 readers of our newsletter (in French and Dutch).

Your task

For six years, different teams of developers have been involved. WeCitizens has some relatively autonomous internet tools:

- Our website, presently under Wordpress
- Our newsletter, which uses the Wordpress plugin Mailster
- The political database, www.PoliticiansOnline.be whose stack is MySQL/PHP/CodeIgniter/JQuery/CSS.
- Our vote advice application, the [Electoral GPS](#), whose stack is Javascript/NodeJS.

You act as webmaster, looking after all the IT tools. We need lots of new developments (especially for PoliticiansOnline) and we rely on you to produce them. When we have IT volunteers, you organize the team work.

We accept both full-time or half-time candidates.

Your profile

University computer scientist, or graduate with three years of professional experience in software production. WeCitizens can consider different statuses (employee, independent, company, etc.).
